

Stainless Steel

S / STA model

Release Notes

Dear Customer,

thank you for the purchase of our P1 Mover S / STA.

This product is unique in many respects.

Manufactured from Stainless Steel and other high quality components, it is very resistant to rust and can be operated in extremely unfavourable conditions.

Proprietary sealing techniques that have been utilised making the mechanical part of the mover water-resistant, allowing temporary immersion in water. Please be aware however, that due to safety reasons (e.g. risk of loosing the launching trailer) and roller actuators design (risk of suction of water due to underpressure created within the actuator) IT IS STRICTLY FORBIDDEN TO ENGAGE OR DISENGAGE ROLLERS WHEN ALREADY UNDERWATER (this must always be done while on dry land).

Also please make sure that the control unit, remote controller or the battery is NEVER submerged and kept dry at all times of operation.

Not obeying the requirements above MAY DAMAGE the Product and WILL MAKE WARRANY VOID!

Enjoy the P1 S...
P1 Team
